Abstract

In this note,

Keywords: control charts, geometric distribution, maximum likelihood estimator, minimum variance unbiased estimator, g and h charts.

1 Introduction

Introduction here....

2 Basic

For example, Benneyan (1999), Benneyan (2000), to name just a few

It is immediate from Lehmann and Casella (1998) that

We can employ the Rao-Blackwell theorem (Rao, 1945; Blackwell, 1947)

For example, Minitab (2020) uses

It should be noted that the R language provides the **hypergeo** package to calculate the hypergeometric function; see Hankin (2016).

In his thesis (Gao, 2020)

Jeong et al. (2018)

Ouyang et al. (2019)

Eun et al. (1989)

3 Equation.....

In Section 2, we reviewed In this section, we will solve some equations.

We have

$$x + y = 0 \tag{1}$$

Substituting $x = -3$ into (1), we have

$$y = 3.$$

However, if one use $x = -10$ in (1), then we have

$$y = 10.$$

We solved an equation. In Section 4, we will incorporate this result into several engineering applications.

4 Application
